### **DETAILED ACTION**

This action is in response to the Application filed on 1 September 2005 in which claims 1-5 are pending.

#### ***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Sopko on 31 March 2008.

The application has been amended as follows:

#### **In The Claims**

Claim 5 (cancel).

#### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: The instant application is deemed to be directed to a nonobvious improvement over the invention published in U.S. Application No. 5398378 and U.S. Patent No. 6886221.

With respect to independent claims 1, 4 and 5, the nonobvious improvement comprises an ear clasp comprising: an opening/closing apparatus for automatically releasing/opening two

housings which are coupled to each other by a hinge portion and are capable of being opened/closed by manipulating a button, the opening/closing apparatus, comprising:

- a rotary member, having a substantially hollow tubular shape;

- a base, integrally fixed within the rotary member;

- a fixing holder, provided with a through hole along a center axis direction thereof;

- a driving cam portion, including:

  - a rotary cam member, which is engaged with the rotary member and which is slidable only along a shaft direction;

  - a fixing cam member, which is integrally fixed to the fixing holder and is arranged opposite to the rotary member; and

  - a first compression spring, which is elastically provided between the rotary cam member and the base;

- a holding cam portion, including:

  - a lift cam member, which is coupled to the fixing holder;

  - a slide cam member, which is engaged with the base, which is slidable only along the shaft direction, and is arranged opposite to the lift cam member; and

  - a second compression spring, which is elastically provided between the slide cam member and the base, the elastic force of the second compression spring is smaller than that of the first compression spring; and

- a clutch portion, including:

a ball, which is slidably held by the fixing holder along a radial direction on a plane perpendicular to an axis and which engages the rotary cam member at a slidable end thereof; and

a cam shaft, which is slidably held only along the shaft direction by the fixing holder, which has a cam groove engaged with the ball, and which is slid with the slide cam member in an integral manner along the shaft direction, as substantially described and connected with the other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
